This office action is responsive to communications filed 04/29/2004.

Claims 1 – 12 are pending.

1. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

2. Claims 1 – 12 are rejected under 35 U.S.C. 102(b) as being anticipated by Cho (US 4,934,399).

Cho discloses a liquid supply apparatus (10) for delivering liquid to a liquid supply point, the liquid supply apparatus comprising: a liquid tank (inherent to (10)); a pipeline (11) connecting the liquid tank and the liquid supply point; a pump (18) set between the liquid tank and the liquid supply point for pumping liquid from the liquid tank to the liquid supply point; a check valve (13) set along the pipeline somewhere between the pump and the liquid supply point for stopping the back flow of liquid after shutting down the pump; and at least a water hammer arrester (20, 22, 28, 30) set between the check valve and the liquid supply point, the arrester having: a pressure sensor (28) for sensing the pressure within in a pipeline; a proportional-integral-differential (PID) control module (30) connected to the pressure sensor for detecting signals submitted by the pressure sensor; and a control valve (20, 22) connected to the PID control module and set in the pipeline, wherein the PID control module controls the operation of the control valve. A pressure level indicator is inherent to the system disclosed by Cho.

It is noted that the supply apparatus (10) disclosed by Cho necessarily performs the method recited in claims 10 – 12, in its usual and normal operation.

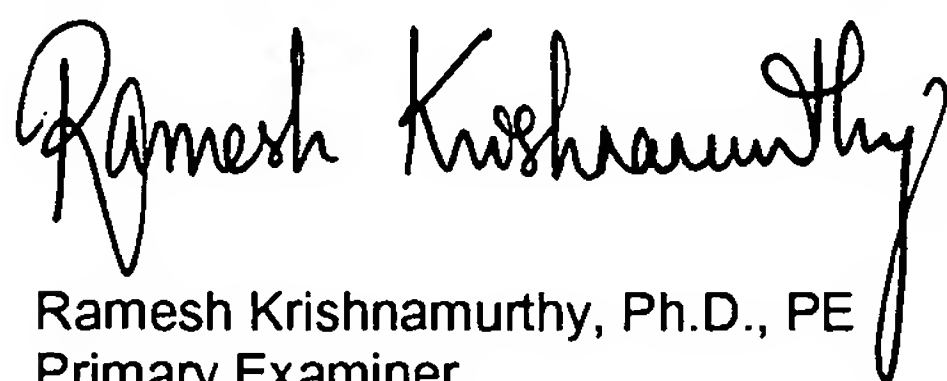

3. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure.
